注: 1. 劳动年龄人口指男16—59岁, 女16—54岁人口。

2. 各年龄组人口缺15岁人口和年龄不详人口, 加总不等于总人口。

3. 由于四次普查所设指标不同, 故此表空栏处均表示该年度普查无此调查项目。

4. 1964年人口普查时, 6—12岁不在校儿童没有调查其相当的文化程度, 故各项文化程度人口加总不等于6周岁及以上人口数。

a. Working age range refers to 16-59 years for men and 16-54 years for women.

b. The sum of the population of the age group is not equal to the total population, because the population aged 15 is not shown and there is population whose true age is unknown.

c. Since the quota in the four population censuses were set differently, the blank space indicates the absence of this item of the year.

d. Data in 1964 excludes the children in school aged from 6-12, thus the sum of the population at all education levels does not equal to the population aged above six.
