a. Figures in this table, except population, cultivated area and mineral resources were obtained from surveys in previous years, and is subject to further verification.

b. The annual total flow of rivers=annual flow of major rivers in our province + branch water + groundwater.

c. The data of cultivated land is actual cultivated land total resources(year end),including common cultivated land and temporary cultivated land.

The date came from Hunan Province Territory Resource Burear. The same as in the following table.
